

Stephanie DeMarco

About Me: I am a recent graduate from the College of Education at Michigan State University. Go Green! My studies with the College of Education included biology, chemistry and integrated studies in science for grades 6- 12. I was hired on by Armada School District in June 2009 as the seventh grade academy science teacher and I am really excited to start a great school year with the students.

My interest in education stemmed from another interest, which is color guard. I realized that I had a passion for teaching after I taught color guard for a few years at East Lansing and Troy High School.

I was introduced to color guard during my high school career at Troy High School in Troy, MI. It has been my hobby for ten years now. I have been on the Spartan Marching Band's color guard and the captain of Michigan State's winter guard team: State of Art. Besides color guard, I also play the flute and was a competitive dancer throughout grade school.

Before I started my journey to become an educator, I received a bachelors of science in Biochemistry and Molecular Biology/ Biotechnology at MSU. This degree allowed me to have the opportunity to work in two university labs; one plant biochemistry lab at MSU and one microbiology lab at Oakland University. While I was working at the MSU lab, I receives the distinct honor of being a published author in the December 2007 edition of the journal "Plant Cell".

My mottos are : "Never say Never"

"You can always make a difference!"
